

FortiManager

In this 1-day class, you will learn the fundamentals of using FortiManager for centralized network administration of many FortiGate devices. Example use cases include large enterprise and carrier networks. You will explore various deployment strategies which include single or multiple ADOMs, policy packages, shared objects, & provisioning FortiManager as a local FortiGuard Distribution Server for your managed firewalls.

Product Version

FortiManager 5.2

Formats

- Instructor-led classroom

Agenda

- 1 Introduction to FortiManager
- 2 System Settings
- 3 Device Manager
- 4 Policy & Objects
- 5 Additional System Operations

Objectives

After completing these courses, you will be able to:

- Describe capabilities of FortiManager
- Add FortiGate devices to the Device Manager and import their running configuration
- Use provisioning templates and scripts for device-level changes across many devices
- Identify the synchronization states
- Manage the revision history of managed devices
- Offer a local FortiGuard Distribution Server to your Fortinet devices
- Deploy administrative domains (ADOMs) to support multiple customers on a single FortiManager
- Manage firewall policies across multiple FortiGate devices using policy packages with shared and dynamic objects
- Deploy policies and objects from the global ADOM to multiple ADOMs
- Explain high availability, backup, and recovery options for FortiManager
- Compare methods for centrally managing IPsec VPNs
- Explain the restricted admin profile and API high-level usage
- Use workspaces and workflow mode
- Replace a managed FortiGate device
- Manage FortiGate devices' firmware centrally

Who Should Attend

Anyone who is responsible for day-to-day management of FortiGate security policies using the FortiManager platform.
